

Getting Started with CALL AI: Individual School Report

CALL AI can help you understand your results, identify strengths and growth opportunities, explore patterns in the data, and develop improvement strategies. Ask questions in plain language, just as you would ask a coach or colleague.

Try these questions/prompts to get started:

1. Please summarize this report.

Get a concise overview of key findings, strengths, growth opportunities, and important themes.

2. What are our greatest strengths?

Identify the leadership practices and areas where your school is performing well.

3. Which areas should we prioritize for improvement?

Ask CALL AI to identify the findings that may have the greatest impact on teaching and learning.

4. What patterns or themes do you see across these results?

Explore connections among domains, practices, and survey items to better understand the story behind the data.

5. If this school has taken CALL multiple times, a good prompt would be:

Please list the 10 highest-rated items and show how the ratings changed since the previous survey administration. Please include item numbers.

6. If you are looking at results from a Quick CALL survey, a good prompt would be:

Please list the items on this report and show how the ratings changed since the previous survey administration. Please include survey item numbers.

You can also ask CALL AI to:

- Create a graph or a chart
- Make connections to other themes that are important in your context such as: education for multilingual learners, equity, and state-level policies or foci, for example.
- Compare item-level data to previous surveys administrations (if administered multiple times)

Lastly, you can ask:

1. Based on these results, help me create an action plan.

Receive recommendations, discussion questions, and practical next steps aligned to your school's needs.
